

The next generation in roof coatings is here

THE NEW DULUX ACRATEX ROOF MEMBRANE formulation takes roof restoration to a whole new level offering better looking, longer lasting results.

Roof Membrane Next Generation Technology is easier to apply giving Roof Painters what their customers want - a great finish that lasts longer, backed by Dulux.

It's the ultimate roof protection with three new advancements

Easier spray application

The new formulation gives a high build finish for great looks and better durability.

Easier to apply with less strain on equipment.

Longer lasting gloss

Roof Membrane Next Generation stays glossy for longer.

Check our test results below.

Looks good for longer

Colours stay true for longer due to less chalking and longer lasting gloss.

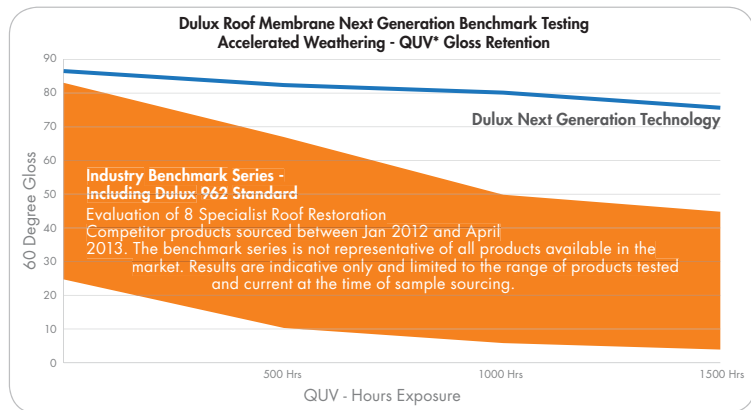

Next Generation Technology

Dulux AcraTex has developed enhanced ROOF MEMBRANE technology to support our Professional Roof Restoration Customers. Our research shows measurably better gloss and greater resistance to chalking leading to a more durable finish and appearance.

- Cross Linking Polymer Structure for lasting gloss and less chalking.
- Enhanced rheology means easier to apply, higher initial gloss and better finish.

*QUV Testing is Accelerated Laboratory Weathering testing typically used to assess formulation benefits and allow like product benchmarking under controlled conditions. Test Results to 25th June 2013.

Real world performance may vary. For more information go to www.acratex.com.au/roofmembrane
